PROFESSIONAL SUMMARY

A Software Engineering graduate (Grand Distinction, First Class Honors — AUCA) with hands-on experience shipping production backend systems for real organizations in Rwanda. Comfortable across the stack, from Spring Boot and Django backends to React frontends, with practical depth in microservices architecture, relational databases, containerized deployment, and cloud tooling. A fast, self-driven learner who builds full production-ready systems rather than prototypes, and enjoys diagnosing problems as much as building new features.

PROFESSIONAL EXPERIENCE

Django Developer Intern — SOLVIT AFRICA (Code2Connect Fellowship II)

Dec 2025 – Mar 2026

Kigali, Rwanda

- Designed, built, and shipped 7 RESTful API endpoints in Django as part of a live production platform, working within a cross-functional agile team.
- Diagnosed and resolved 3 production bugs, directly improving the reliability and stability of the deployed application.
- Authored and executed a full suite of automated tests across every endpoint in the project, establishing consistent API test coverage.
- Designed the project's relational database structure (ERD) and presented the data model to the team, aligning the schema with business requirements.

KEY PROJECTS

MYESolution — Training Management Platform

Solo Developer • [myesolution.org](#)

- Architected and built an end-to-end digital training management platform solo, from system design through production deployment.
- Designed a microservices architecture with a Spring Cloud API Gateway and Netflix Eureka service discovery — separate Auth, Course, School, and Notification services, each with an isolated PostgreSQL database.
- Implemented JWT authentication with role-based access control, and integrated Cloudflare R2 for scalable file and certificate storage.
- Built a custom lesson editor, digital certificate issuance with LinkedIn certificate sharing, and Africa's Talking SMS notifications.
- Containerized all services with Docker and managed the complete DevOps lifecycle, including environment configuration and cloud deployment.

Mobbix Hardware — Retail Management System

Product Designer & Developer • *Kigali, Rwanda*

- Designing a configurable, reusable Retail Management System for hardware stores, built as a public marketing website (Spring Boot, React) paired with an internal desktop application (.NET 8, WPF, MVVM, Entity Framework Core).
- Implemented a layered architecture (Presentation → Business Logic → Service → Repository → Database) covering inventory, procurement, sales, suppliers, customers, and analytics reporting.
- Architected the product to be sellable across multiple hardware retailers rather than tied to a single client.

Hameau des Jeunes — Youth Organization Platform

Team Project (Django Backend) • [hameaudesjeunes.org](#)

- Built RESTful APIs and server-side business logic as the Django backend developer within a cross-functional team.
- Implemented data models and authentication flows powering the organization's live production website under real client and deadline constraints.

UbugeniPalace — Artisan E-Commerce Platform

Solo Developer

- Designed user and artisan modules with complete product management workflows for a digital marketplace supporting local Rwandan artisans.
- Built the relational database schema covering inventory, users, and transactions.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript (ES6+), Dart, SQL, PL/SQL, C, C++, Swift

Backend: Spring Boot, Django, Flask, REST APIs, JWT Authentication, Microservices, Event-Driven Architecture, WebSockets, Redis

Frontend & Mobile: React, Flutter, HTML/CSS, Responsive UI Design

Databases: PostgreSQL, MySQL, Oracle Database, PL/SQL, Data Modeling, Query Optimization

DevOps & Cloud: Docker, Git/GitHub, GitHub Actions (CI/CD), AWS, Cloudflare R2, Supabase, Linux Server Administration

Architecture & Practices: Clean Architecture, Modular Monoliths, SOLID, OOD, UML, RESTful API Design, Agile Scrum

EDUCATION

Bachelor of Science with Honors in Software Engineering

2022 – 2026

Adventist University of Central Africa (AUCA), Kigali, Rwanda

- Grand Distinction (First Class Honors) — Overall GPA 16.92/20, Major GPA 16.91/20.
- Degree to be conferred at AUCA's 32nd Graduation Ceremony, 15 November 2026.

Certificate in Mathematics, Physics and Computer Science

Collège Adventiste de Gitwe — 2022

CERTIFICATIONS

- Getting Started with DevOps on AWS — AWS Training & Certification, Mar 2026
- App Development with Swift — Apple Authorised Training, Jan 2026
- Code2Connect Fellowship II (Django) — SOLVIT AFRICA / Digital Opportunity Trust Rwanda, Dec 2025 – Feb 2026
- Advanced NetOps — Cisco Networking Academy, 2025
- AICE: Artificial Intelligence Career Essentials — ALX Rwanda
- Virtual Assistance — ALX Rwanda
- Duolingo English Test — 2025
- Networking Basics — Cisco Networking Academy (via AUCA), Nov 2024
